

# Zero-Day-as-a-Service (ZDaaS)

## Your Ultimate Defense Against Zero-Days in Your Supply Chain

Zero-day vulnerabilities are unseen, undetectable risks, waiting to exploit gaps in your IT environment and supply chain ecosystem. Your team can do everything right and still be breached due to a zero-day attack.

SecurityScorecard's **Zero-Day-as-a-Service (ZDaaS)** is an early warning and detection service, alerting organizations to new and emerging potential zero-day vulnerabilities across their third-party vendor landscape.

ZDaaS includes forward-looking threat horizon scanning and research using SecurityScorecard's rich catalog of data signals for initial indications of zero-day vulnerabilities. ZDaaS also includes monitoring notifications and alerts from vulnerability datasets, such as NIST's National Vulnerability Database and CISA's Known Exploited Vulnerability Catalog.

ZDaaS is included in SecurityScorecard's Managed Cyber Risk Services **Gold** and **Platinum** solutions and available as an individual service.

## Service Offering

**Zero-Day Vulnerability Identification:** Our cyber analysts leverage SecurityScorecard signals and threat intelligence to identify active zero-day exploits as they are identified.

**Vendor Assessment for Potential Impact:** Vendors within your third-party ecosystem are assessed for potential impact to announced zero-day vulnerabilities.

**Zero-Day Reports:** Our comprehensive reports provide precise recommendations where possible to counter identified zero-day vulnerabilities to help solidify your cybersecurity defenses.

## Business Benefits

### **Predictive Defense:**

Safeguard against emerging security threats with proactive alerting and response to emerging security threats.

**Rapid Response:** Minimize zero-day impact, protect your data and reputation.

### **Informed Decision-Making:**

Drive informed choices with actionable insights for cyber risk management.

**Trusted Partnership:** Lean on cybersecurity experts for zero-day challenges.

# Managed Cyber Risk Services

SecurityScorecard's Managed Cyber Risk Services bridge the gap between vendor risk and cybersecurity by helping organizations augment their existing third-party risk cyber programs with a team of cybersecurity professionals with experience in incident response to uncover vulnerabilities and improve cyber hygiene across their vendor landscape.

## Managed Cyber Risk Services Solutions

Choose between Silver, Gold, Platinum, and custom assessments to meet your organization's needs.

	SILVER Manage and monitor non-critical vendors	GOLD Outsource vendor management; continue managing vendor communications	PLATINUM Outsource both vendor management <i>and</i> communications.
Platform configuration (rules, tags, alerts & portfolio setup)			
Incident Likelihood Assessment (platform based only)	<i>initial and annual</i>	<i>initial and semi-annual</i>	<i>initial and quarterly</i>
Cyber incident alert notification	<i>weekly</i>	<i>daily</i>	<i>daily</i>
Cyber incident validation & investigation communication		<i>daily</i>	<i>daily</i>
Monthly reporting on vendor status by portfolio, vendor score changes, & additions/deletions to portfolios			
Monthly Automatic Vendor Detection (AVD) sweeps			
Vendor Invitations			<i>custom vendor onboarding</i>
Zero-Day-as-a-Service for all vendors (available standalone)			
Option for custom questionnaire based assessments			
Complete cyber risk vendor management & communication			
Communication and plan of action meeting facilitate with vendor regarding incident			
End-to-end cyber security questionnaire management			

### WHY SECURITYSCORECARD:

-  Rapidly **uncover critical vulnerabilities** that present a risk to your organization's security
-  Powered by **context-rich data, telemetry, and threat intelligence** curated by world-class cyber defenders
-  Only security ratings company **delivering predictive data & intelligence** to the cyber vendor risk landscape.
-  Only security ratings with **incident response, digital forensics, and proactive security services.**

### Delivered by SecurityScorecard's Risk Operations Center (ROC)

The ROC is a team of expert threat intelligence, incident response, and cyber risk management professionals who leverage SecurityScorecard's vast data signals and telemetry to proactively monitor emerging threats and vulnerabilities.
