

# Improve The Profitability of Your Cyber Insurance Business

Underwriting applications may not have all the information needed to understand a company's cybersecurity risk. Not seeing the issues that your competitors are flagging could increase your loss ratios and jeopardize your business's visibility.

SecurityScorecard continuously identifies cyber risk insights to help cyber underwriters select the most profitable risks. All you need is the applicant's domain address to start leveraging the industry's most comprehensive and actionable cyber risk data.

## Key Benefits

### Lower Loss Ratios

Reduce adverse risk selection and accurately identify all the security attributes that increase claims frequency and severity

### Lower Expense Ratios

Improve time to quote and bind by focusing underwriting efforts on accounts and activities that can provide the most value

### Increase Customer Satisfaction

Deliver an exceptional customer experience with a faster and less intrusive underwriting process

## Why Choose SecurityScorecard?

### TRUST

We have built **the most comprehensive data collection and attribution infrastructure**, giving customers relevant, actionable, and trusted cyber risk information.

**+12M**

**continuously monitored companies** across the world and every industry

**97%**

**of data is collected and owned** by SecurityScorecard

**+100B**

**vulnerabilities and attributions** published weekly

[LEARN MORE](#)

### ACCURACY

We have the **most engaged and active community of security practitioners**, driven by a unique freemium model that incentivizes users to maintain an accurate view of their organization's security posture.

**+37k**

**companies signed up** to use SecurityScorecard

**7-8**

**point score improvement** for engaged organizations

**+6M**

**feedback items** from the community each year

# Capabilities

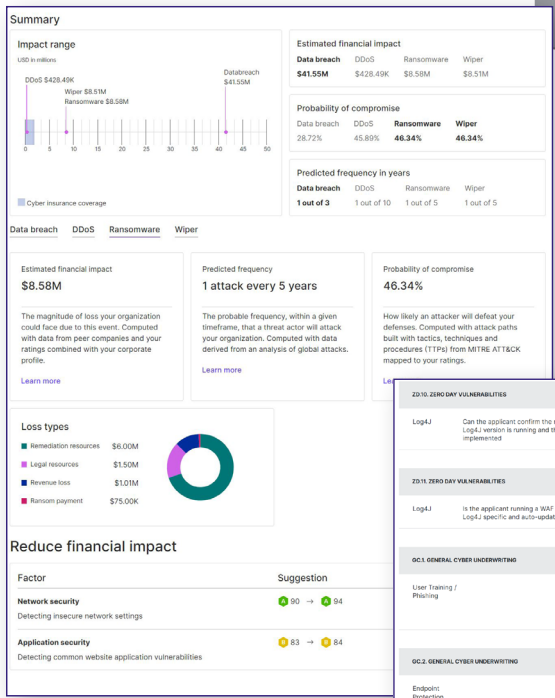

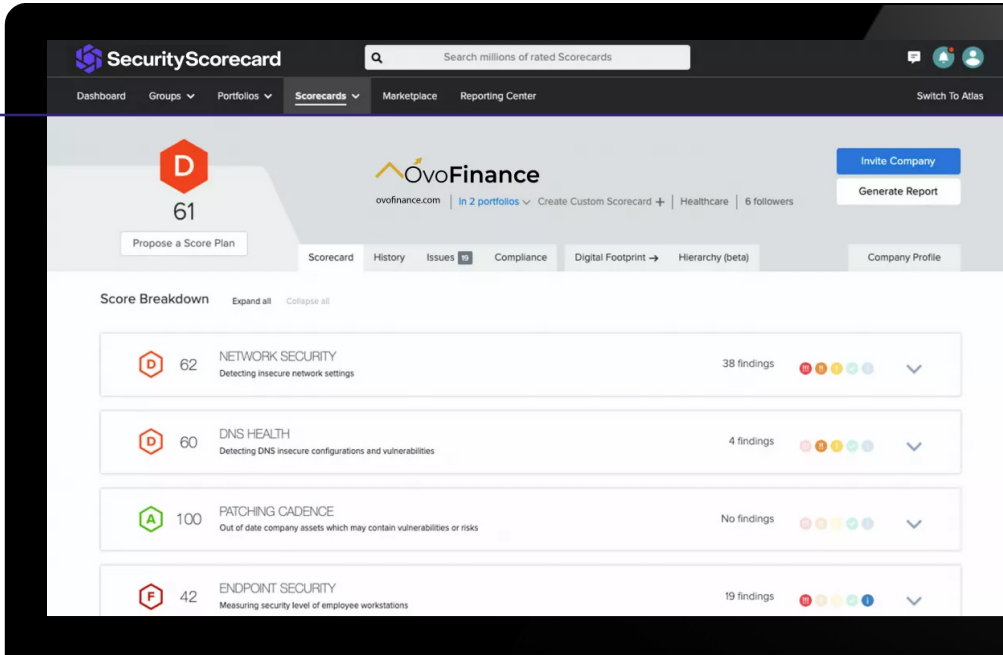

## Integrated Cyber Risk Data and Analytics Platform

### Quickly triage applications

Leverage intuitive ratings correlated with the likelihood of breach to determine which risks fall within your appetite guidelines

### Streamline underwriting assessments

Map your underwriting application against SecurityScorecard signals to consistently review the data that matters

### Prioritize subjectivities

Determine the security issues that are driving the likelihood of cyber incidents

### Validate subjectivity remediation

Obtain independent verification about if and when an insured remediates specific issues

### Reduce supply chain risk

Verify exposure to vendors and technologies that create systemic risk

### Inform pricing decisions

Quantify the financial impact of an applicant's cyber risk to ensure premiums adequately cover exposure

### Summarize and share findings

Educate insureds with whitelabeled reports that summarize their cybersecurity posture

Category	Issue	Findings
ZD-10: ZERO-DAY VULNERABILITIES	Log4J: Can the applicant confirm the most current and up-to-date Apache Log4J version is running and the prescribed patch has been implemented?	No findings
	Log4J: Is the applicant running a WAF (with application firewall) with Log4J specific and auto-update rules set?	No findings
GC1: GENERAL CYBER UNDERWRITING	User Training / Phishing: Exposed Personal Information (Historical)	5 findings
	Phishing: Email exposed	5 findings
GC2: GENERAL CYBER UNDERWRITING	Endpoint Protection: Outdated Web Browser Observed	9 findings
	Cloud Provider Service Used: Cloud Provider Service Used	6 findings
	FTP Service Observed	4 findings
	HTTP Proxy Service Detected	15 findings

## Start the Journey Towards Improved Cyber Insurance Underwriting

Integrate security ratings in pre-qualification workflows with the free SecurityScorecard Chrome extension.
