

Secure your entire ecosystem without compromising on innovation

Attain a strong cloud governance posture

Drive success and security in the cloud with a robust cloud governance posture that helps you run your business well and keep it safe with the support of AWS and SecurityScorecard. Start by understanding the four pillars of cloud governance visibility, configuration, operations, and risk—and how they affect the security of your cloud assets.

Manage the cloud governance pillars with AWS and SecurityScorecard

Visibility

Maintain an accurate, detailed, and up-to-date view of your cloud infrastructure

Configuration

Ensure compliance by continually finding, addressing, and tracking misconfigurations

Operations

Automate processes to detect, report, and remediate operational issues

Risk

Optimize cloud resources to reduce the likelihood of data breaches, system vulnerabilities, and errors

About SecurityScorecard

SecurityScorecard is the leading security ratings platform that enables you to instantly rate, understand, and continuously monitor the cybersecurity risk of any company, non-intrusively. We help you identify zero-day exploits within your cloud and IoT ecosystems in real time to keep pace with threat actors and protect your organization's intellectual property.

Consistent cloud governance secures the business

A strong cloud governance strategy helps:

- Reduce risks of IP loss
- Address compliance mandates and security audits
- Minimize risks of malware and ransomware
- Mitigate third-party risk

Deploy SecurityScorecard for free to rate the cybersecurity posture of any organization in minutes.
