

TRUST PORTAL

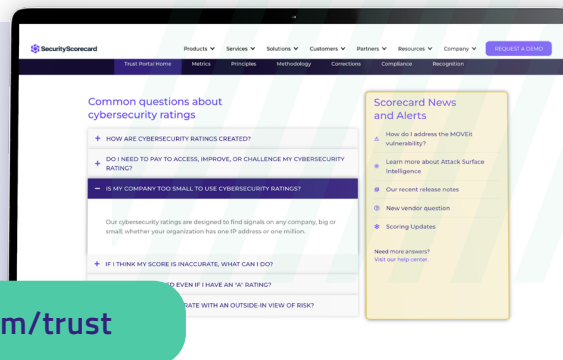

Your cybersecurity journey begins with trust

Security rating companies use a combination of data points collected organically or purchased from public and private sources, and then apply proprietary algorithms to articulate an organization's security effectiveness into a quantifiable score. We understand that there is often skepticism behind the idea of security ratings which is why we take the concept of trust so seriously.

SecurityScorecard is committed to providing transparency into our ratings methodology and delivering insights into how it aligns with industry standards. For SecurityScorecard, this transparency is shown through our Trust Portal.

Your one-stop shop for data, documentation, and transparency

www.securityscorecard.com/trust

The Trust Portal serves as a single source of truth when looking for answers to questions about:

-  The validity and accuracy of our ratings
-  Our scoring methodology and data collection processes
-  How we comply with industry standards and regulations

The portal is available to anyone interested in learning more about how our ratings are determined and to help you eliminate some of the misconceptions around the validity of security ratings.

Why is it called the Trust Portal?

This Trust Portal is intended to provide organizations with a source of truth behind our ratings to instill a confidence in the validity of our ratings as an accurate measurement of cyber risk.

Trust shouldn't come at a cost

At SecurityScorecard we believe that everyone should have access to their rating and be able to correct it if they feel it is inaccurately represented. Users can sign up for an account **for free**, appeal our findings for free, and check our error rate for free (with no expiration date).

We also disclose how we calculate our ratings and how we can validate their accuracy to provide confidence in the security decisions you are making.

“

“Our Trust Portal makes SecurityScorecard the only cybersecurity company to provide this level of transparency in a single location, to give you and your vendors confidence in our 360 platform and ratings data.”

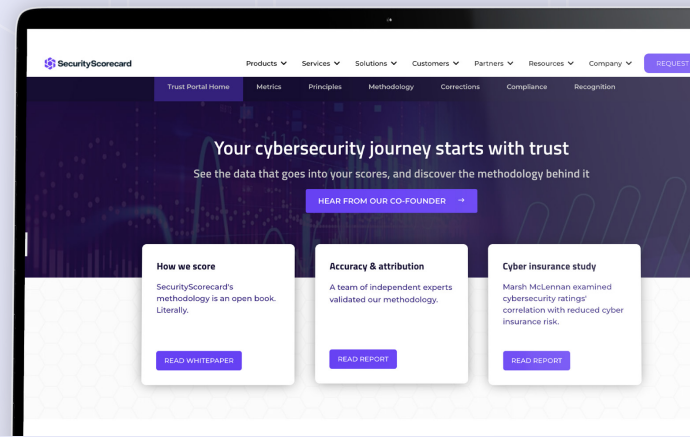

Sam Kassoumeh
Co-Founder, SecurityScorecard

”

Everything you need to understand SecurityScorecard's cybersecurity ratings and how they work lives on the Trust Portal.

Trust Portal Home

The Trust Portal Home page is the first tab you will be directed to when visiting the Trust Portal. The Trust Portal Home page quickly provides you with an overview of what you can learn while visiting our Trust Portal and a simple way to navigate to the sections listed below.

Here's what you will find on the Trust Portal:

Performance Metrics

Find live metrics of our performance, including: overall statistics, corrections, response times, and ratings stability.

Our Guiding Principles

Learn about the underlying beliefs and guidance behind our cybersecurity ratings.

Scoring Methodology

Everything you need to know about how we calculate our ratings and weigh our findings.

Making Corrections

How we work with you to correct your ratings if you believe something is inaccurate.

How we comply with industry standards

See what frameworks and standards we comply with and view our certifications and endorsements.

Data Dashboard

Interact with a live dashboard to allow you to view and analyze our data.

SecurityScorecard highlighted metrics

1 MILLION+
Unique Companies Followed

12 MILLION+
organizations rated

99.05% ACCURACY
of automated Domain and IP attribution.
