Microsoft Sentinel

Modernize security operations and focus on what matters most with a cloud-native SIEM, enriched by AI.

Microsoft Sentinel is a modern, cloud-native SIEM powered by AI, automation, and Microsoft's deep understanding of the threat landscape empowering defenders to detect, investigate and respond to threats – quickly and efficiently. With in-built security orchestration, automation, and response (SOAR) capabilities, user and entity behavior analytics (UEBA) and threat intelligence (TI), customers get a comprehensive solution that is both easy and powerful. Microsoft Sentinel aggregates security data from all sources, including users, applications, servers, and devices running on-premise or in the cloud. By eliminating on-premises infrastructure, it lowers costs by 48% compared to legacy SIEMs, as found by the commissioned Forrester Consulting Total Economic Impact™ of Microsoft Sentinel study. With Microsoft Sentinel defenders can hunt and resolve critical threats quickly and efficiently.

Scale and Enhance your Security Operations with SecurityScorecard

SecurityScorecard's integrated solution for Microsoft Sentinel enables you to scale your security operations for enterprise cyber risk management and vendor risk management with SecurityScorecard Ratings. As a market leader in security information and event management (SIEM), enterprises around the world rely on Microsoft Sentinel to give security operation centers (SOCs) visibility into security events and log management of data across the organization.

Customer Benefits

- **Scale your Security Operations and VRM Programs** – Continuously monitor your organization and vendors in one platform and access SecurityScorecard's top-level, factor-level, and issue-level ratings data in Microsoft Sentinel.

- **Gain Total Operational Command of your Cybersecurity Posture** – Combine and correlate SecurityScorecard data with third-party threat intelligence and data from your infrastructure, streamlining oversight of your ecosystem.

- **Create Automatic Alerts & Follow Ups** – Leverage the power of Microsoft Sentinel to search, visualize, and act on data, enabling efficient monitoring of enterprise cybersecurity and third party risk.
