

TITAN Watch

Foundational Visibility and a clear understanding of risk in your vendor ecosystem

THE CHALLENGE

Many organizations struggle to find a clear external view of their security posture and third party risk, leaving them vulnerable to cyber risk. Prioritizing security issues is difficult, technical vulnerabilities are often impossible to translate into business-ready reporting, and manual questionnaires are a massive administrative burden. Organizations need an objectionable, actionable measure of their cyber risk.

Fragmented Visibility: Organizations lack a clear way to monitor their own attack surface and their supply chain.

Questionnaire Operational Burden: Managing questionnaires and collaborating with vendors is a manual, disjointed process.

Inconsistent Reporting: Translating technical vulnerabilities into business-ready reporting for executives and boards remains a significant hurdle.

THE SOLUTION

The TITAN Watch offering within SecurityScorecard's TITAN AI platform helps organizations monitor risk in their extended supply chain and gain a clear understanding of their security posture.

Get Visibility into Your External Vulnerabilities

Master Your Digital Footprint

Gain a multi-dimensional view of your environment by combining security ratings with real-time attack surface discovery.

Eliminate Third- Party Blind Spots

Monitor critical vendors and automatically detect previously unknown vendors across your entire ecosystem with Automatic Vendor Detection (AVD).

AI-Powered Agents

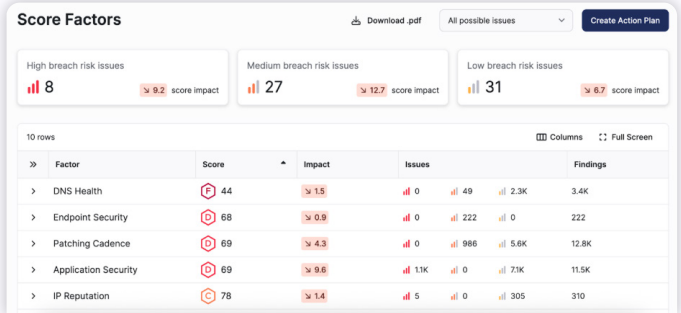

Leverage AI agents to save you time – create actionable remediation plans, relevant reports, and get a summary of vendor monitoring.

A Unified Approach

TITAN Watch uses a multi-dimensional approach to transform your cyber risk management.

Increase Confidence

Measure, quantify, and report on your team's performance.

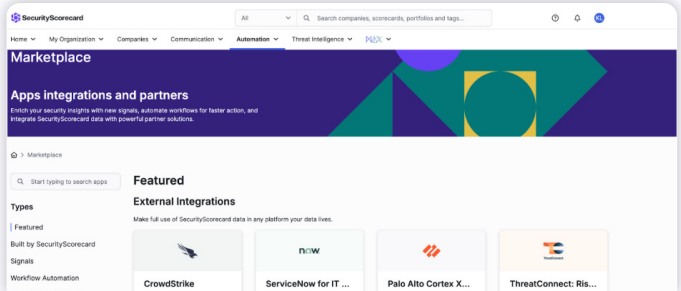

Effectively Report Risk to your Board and Auditors

Benchmark and communicate on the security posture of your own organization and your vendors with downloadable board reports.

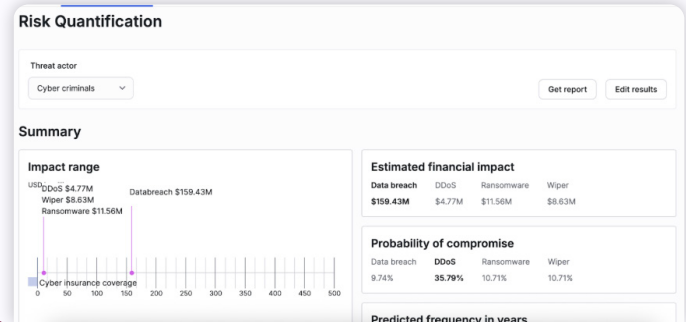

Integrate your Tech Stack

Automate security and vendor risk workflows with over 60 out-of-the-box integrations in the largest ybersecurity ratings Marketplace.

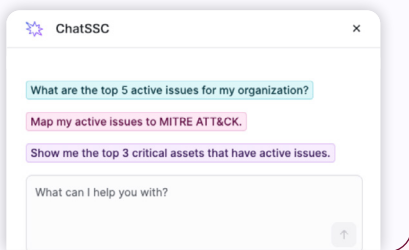

Translate Risk into Dollars

Quantify the financial impact of cyber risk and justify the need for budget to leadership.

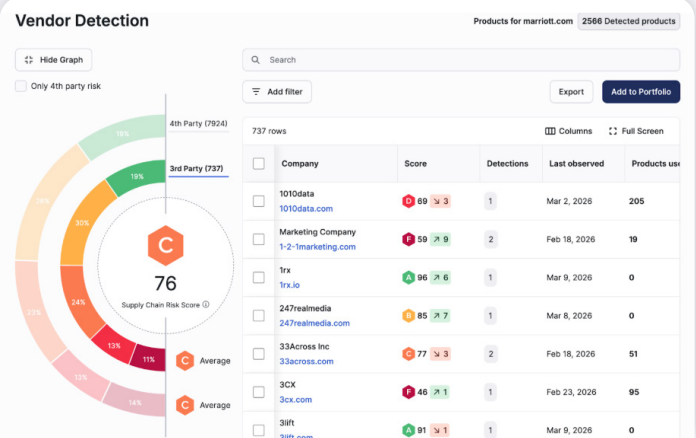

AI-Enhanced Risk Insights

Use our AI agents to understand your risk profile, the context of your security data, and automate low leverage tasks.

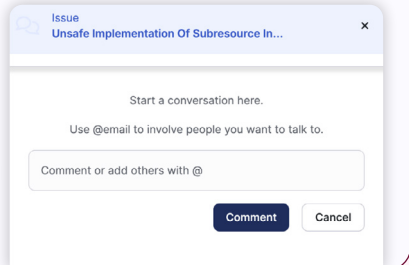

Detect Unknown Vendors

Instantly get a view of your digital supply chain ecosystem to help take active steps to mitigate risk.

Seamless Vendor Communication

Collaborate with your partners by inviting them into the platform to assess and remediate vulnerabilities within their attack surface.

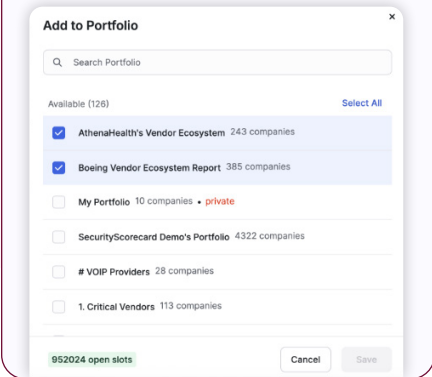

Increase Visibility

Gain a 360-degree view of your own network and your complete business ecosystem. Save time by evaluating third-and fourth-parties based on the amount of risk they present.

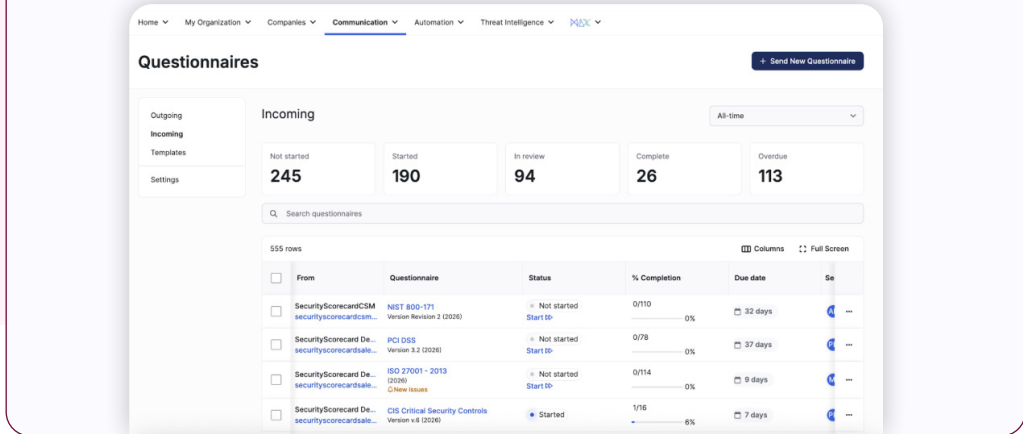

Monitor Vendors at Scale

Continuously track, monitor, and tag high-level scorecard scores of organizations that are not part of a portfolio.

Exchange and Validate Questionnaires

Accelerate the cybersecurity questionnaire exchange process by empowering organizations to send, complete, and automatically validate questionnaires at scale.

Key Performance Statistics

7B+

leaked credential and PII databases in-house from across the dark web and forums.

4.1B+

IPs and domains scanned daily to identify over 100B vulnerabilities weekly.

12M+

Organizations rated using organically collected intelligence.

verdane

“

SecurityScorecard's solution has been very well received by our portfolio companies and has encouraged many of them to implement a key performance indicator around their cybersecurity posture.”

Thomas Baasnes
Cybersecurity Director
