

Securing the world's supply chains

SecurityScorecard is the global leader in threat-informed Third-Party Risk Management (TPRM), securing the supply chains that power the world's largest enterprises, financial institutions, and critical infrastructure providers. We empower organizations to outpace escalating supply chain complexity by modernizing the way they **manage, detect,** and **respond** to risk. By replacing manual, legacy TPRM models with continuous intelligence and AI-accelerated workflows, we move teams from 'check-the-box' compliance to threat-informed TPRM/supply chain resilience.

WHAT WE DO

Modern TPRM Built for Transformation

Your Journey to Threat-informed TPRM

SecurityScorecard introduced an industry-first customer transformation model, Supply Chain Resilience Journey, designed to help organizations understand exactly where their TPRM program stands today and how to advance it. The journey maps four progressive stages: Basic Diligence, Periodic TPRM, Continuous TPRM, and Threat-Informed TPRM.

Rather than prescribing a one-size-fits-all approach, SecurityScorecard meets customers exactly where they are based on their maturity and capacity, then provides AI-accelerated workflows, continuous intelligence, and expert services to help them evolve at their own pace. Whether an organization is still relying on spreadsheets or already running a mature continuous monitoring program, SecurityScorecard's TITAN AI platform is designed to amplify what teams have already built.

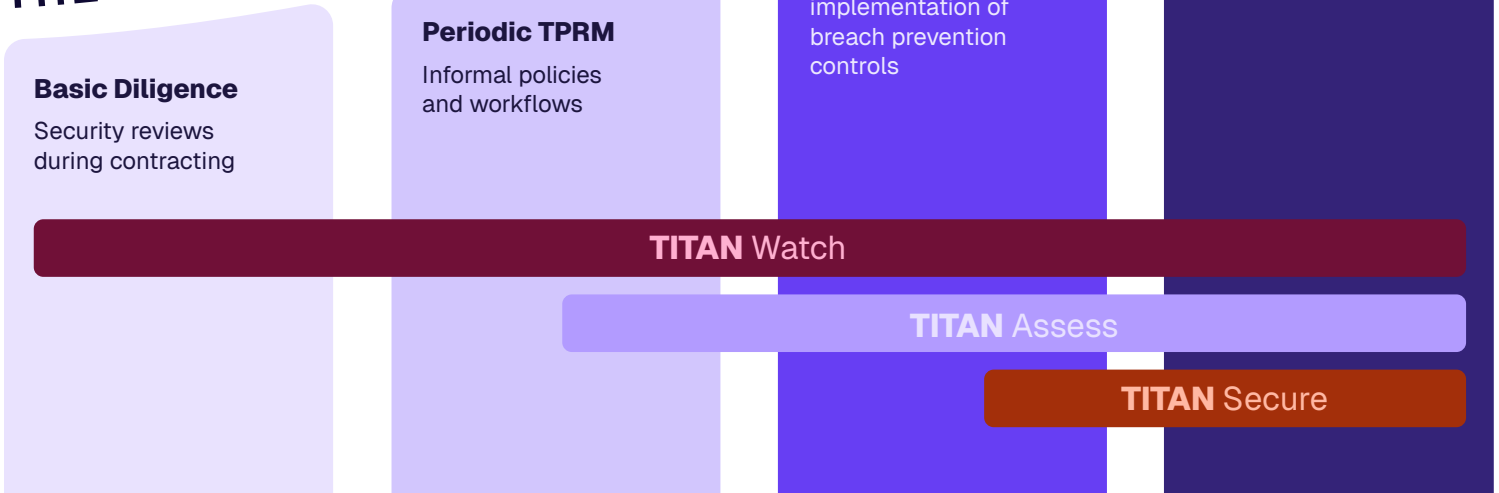

SecurityScorecard has absolutely helped us mature our third-party risk management program. We now get some level of cyber insight for 100% of the third parties that come through our risk management process."

Phil Addison
Manager of Third-Party Cyber Risk Management

The **TITAN** AI Platform

Continuous, AI-acclerated, Predictive Defense

How we do it

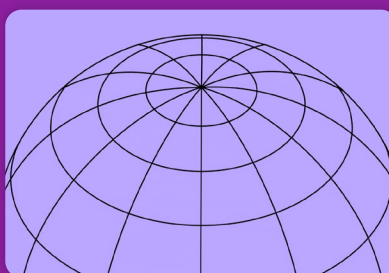

Security teams are drowning in unanswered questionnaires and disconnected data that doesn't give them the full picture of risk or translate into action. Even when risks are identified, remediation is slow and manual. Boards demand ROI from their security investments, yet alternatives only offer tactical tools without proof of risk reduction outcomes.

TITAN AI was built alongside future-leaning SecurityScorecard customers to solve these exact problems. The platform is organized into three offerings that meet teams where they're at, and take organizations from foundational visibility to active, threat-informed defense:

TITAN Watch

Foundational visibility. Teams gain a comprehensive, continuous understanding of their third-party risk landscape — who their vendors are, what they look like from the outside, and where the most critical exposures exist.

TITAN Assess

Intelligent automation. Teams reduce manual work by 92% through AI-driven questionnaire automation, risk prioritization, and streamlined vendor workflows — enabling faster, more accurate assessments at scale.

TITAN Secure

Threat-informed response. Organizations move beyond monitoring to active threat prevention, integrating real-time threat intelligence directly into risk triage and executing automated response workflows across the entire supply chain.

MAX Managed Services

For organizations seeking additional operational support, our **MAX Managed Service** delivers TPRM outcomes while reducing the need for dedicated in-house resources. MAX identifies high-risk vendors in your ecosystem, continuously monitors active threats, and drives swift vendor remediation.

Amplify Your Impact

- Understand your entire supply chain and identify the riskiest vendors
- Respond with precision when a vendor is breached
- Prioritize risk more effectively with full relationship context and threat signals
- Strengthen vendor engagement with transparent, shared data
- Confidently communicate measurable risk reduction to executives

THE OUTCOME

- 75%** reduction in third-party breaches
- 92%** drop in manual effort
- 100%** confidence in your decision making

WHAT MAKES US DIFFERENT

Redefining what 'Modern TPRM' means

The Highest Quality Data

in TPRM: With 10 years of historical data and 99% of our data in-house, we have the largest proprietary threat intelligence data set on the planet. Our customers gain unparalleled accuracy and speed needed to eliminate middlemen, reduce false positives, and remediate faster.

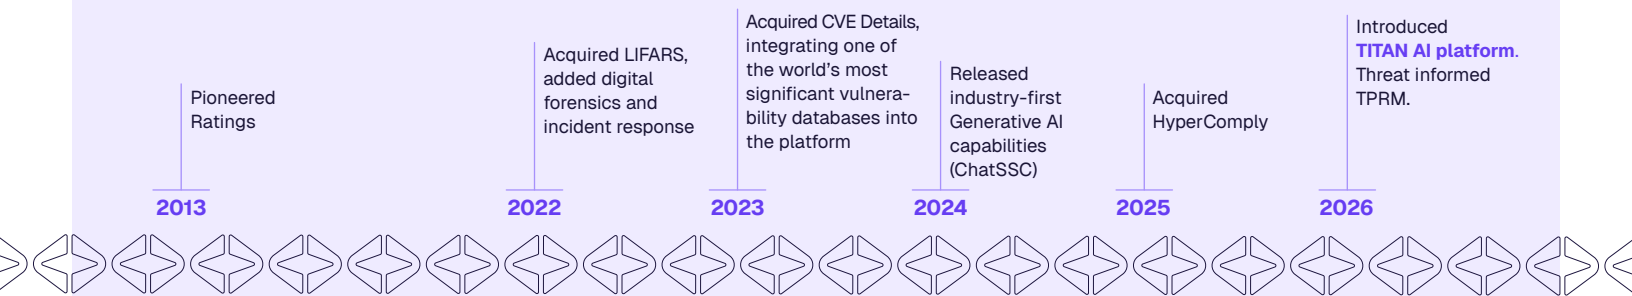

Continuous transparency:

Don't wait weeks for a vendor assessment. With over 12 million continuously rated entities, you get instant answers when adding a vendor to your ecosystem. Access over a decade of historical intelligence and real-time data immediately, whether onboarding a partner or addressing a zero-day event.

Unparalleled Innovation:

With 70% of the Fortune 100 as partners, we don't just follow the TPRM market—we define it. We build alongside future-leaning leaders to deliver the predictive, AI-accelerated solutions required to stay ahead of today's supply chain.

More than ratings. Continuous innovation for supply chain risk.

Twelve years ago, SecurityScorecard pioneered cybersecurity ratings to give organizations a way to measure, understand, and improve their cyber hygiene. **But risk doesn't stand still—and neither do we.** Over the last twelve years, we've listened to our customers and have evolved our solutions to keep them ahead of the threat: a growing, increasingly targeted supply chain. We've built our solutions to grow with you, knowing that supply chain risk is only intensifying.

Today, SecurityScorecard is the global leader in **threat-informed TPRM**, trusted by 3,300+ organizations worldwide, including 70% of the Fortune 100 and multiple national governments. Our insights are relied upon by TPRM, risk, security, compliance, and audit teams globally.
