

TITAN MAX Service

Streamlined Compliance and Continuous Supply Chain Risk Mitigation

THE CHALLENGE

Vendor Lifecycles Overwhelm TPRM Teams

The vendor risk management lifecycle overwhelms TPRM teams seeking to verify that vendors meet security or compliance requirements. Assessment backlogs, untended vendors, and urgent reporting timelines expose gaps in an organization's cyber TPRM immaturity. These organizations often face aggressive timelines for closing these gaps to satisfy regulators or auditors.

At the same time, the global shortage of skilled cybersecurity and risk professionals has created intense competition for talent. High turnover and burnout further compound the problem, as existing staff are often stretched thin managing large volumes of assessments, monitoring alerts, and compliance demands without adequate support.

THE SOLUTION

Technology-Enabled Cyber TPRM Service

TITAN MAX inserts technology and expertise at every stage of the vendor lifecycle to drive TPRM outcomes. The traditional vendor lifecycle is transformed from an overwhelming quest to understand vendor risk to an adaptive experience fueled by automation and predictive insights. With TITAN MAX, organizations can free up resources for strategic projects while advancing their compliance and security goals.

Powered by the experts using the SecurityScorecard platform, TITAN MAX defines strategy, identifies high-risk vendors, continuously monitors active threats, and drives vendor remediation to strengthen your organization's third-party cyber resilience. With advanced data and workflows, TITAN MAX delivers cleared assessment backlogs, higher vendor engagement, and continuous adherence to risk management requirements.

I don't have to worry about our third party risk management at this point.

Senior Director IT Manager
Automotive Parts Manufacturer

TITAN MAX enhances your TPRM program by

Streamlining cyber TPRM processes

Reduce the time and effort required to provide cyber TPRM deliverables to business and vendor stakeholders

Meeting compliance requirements

Advance the maturity of your supply chain risk management program to meet increasingly onerous regulatory demands

Mitigating supply chain cyber risks

Drive proactive vendor issue resolution before they lead to breaches that impact your data privacy and business operations

SecurityScorecard has helped us mature our understanding of how events occur, what could be potential threats, and how to get in front of them before they cause damage.

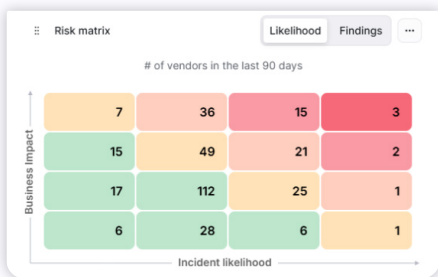

Cybersecurity Analyst | Fortune 500 Services Provider

How TITAN MAX Works

Drawing on cyber risk management best practices from organizations such as NIST, TITAN MAX enables compliance, continuous cyber risk awareness, and focused risk reduction efforts for monitored vendors and organizations. This framework ensures that risk management teams can efficiently assess, monitor, and respond to risks across the entire vendor ecosystem.

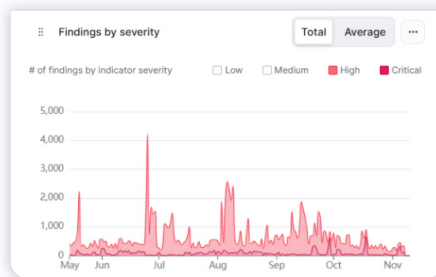

ASSESS

Identify gaps in a vendor's security program and the likelihood of the vendor encountering a serious cybersecurity incident

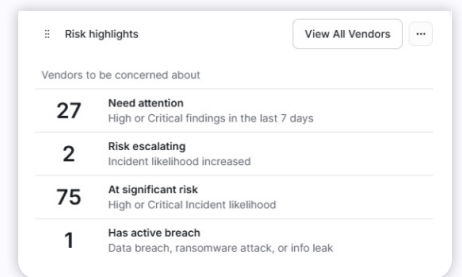

MONITOR

Leverage threat intelligence, trend data, and vendor attack surface assessments to gain a threat-informed and continuous view of third-party risks

RESPOND

Advise your teams and your vendors on how to enhance cybersecurity posture, reducing breach risks and preventing serious incidents

THE OUTCOMES

Streamline cyber TPRM processes

Most risk management teams face an impossible challenge: properly managing hundreds or thousands of vendor relationships with limited staff. The endless cycle of assessments, reporting, and vendor outreach consumes valuable resources that could be better used elsewhere.

TITAN MAX transforms this burden into a strategic advantage

- **Focus on what matters:** Your team can offload routine risk management tasks and concentrate on high-value, strategic initiatives
- **Automation that works:** TITAN MAX automates risk assessments, reporting, and continuous vendor monitoring, dramatically reducing manual effort
- **Expertise on demand:** Access specialized supply chain risk management expertise without expanding your team

26x

Reduction in questionnaire review cycle times

131

Hours saved per vendor per year on cyber TPRM tasks

50%

Cost savings over do-it-yourself approach

Meet Compliance Requirements with Confidence

Regulators and standards organizations now recognize that cyber risks can cascade through supply chains, affecting entire industries. As a result, they've created stringent supply chain risk management requirements that most organizations struggle to meet.

TITAN MAX accelerates cyber TPRM program maturity improvement

- **Audit-ready documentation:** Every vendor interaction, assessment, and remediation effort is automatically documented, creating clear audit trails that demonstrate due diligence
- **Incident response readiness:** When security incidents occur, TITAN MAX helps you determine the broader impact on your organization and meet time-sensitive reporting requirements
- **Quantitative management tools:** Objective, data-driven insights pinpoint gaps, track progress, and focus your attention on the areas of highest maturity improvement

SUPPORTS MULTIPLE FRAMEWORKS AND REGULATIONS

ISO 27001	SOC 2
NIST 800-53	DORA
NERC CIP	GDPR
CMMC	NIS 2

I invested in TITAN MAX because I would never be able to replicate the quality of that team and of the outcomes they deliver.

Senior Director, Third-party Cyber Risk Management | Global Healthcare Company

Mitigate Risk of Supply Chain Disruptions

Supply chain breaches have become the fastest growing concern for organizations, with attacks through third parties increasing by 100% year-over-year and costing 40% more to respond to than first-party breaches. Yet TPRM teams don't have the capacity to collaborate with vendors on remediating issues before they are exploited by threat actors.

TITAN MAX strengthens operational resilience

- **Preventing supplier-related downtime:** TITAN MAX continuously monitors third-party risks using to detect issues that can be exploited by threat actors
- **Ensuring business continuity:** TITAN MAX develops and executes supply chain incident response plans that reduce potential entry points for attackers
- **Mitigating concentrated risk:** Advanced security assessments help identify vulnerabilities in nth-party systems that could impact your critical business functions
